

ABSTRACT

Title: An Earthmoving Blade and Mounting Assembly

- 5 An earthmoving blade and mounting assembly, includes at least one generally hollow section mounting arm which mounts the blade in use on an earthmoving machine, the arm including a generally sideways opening channel and a generally upright closure plate which closes the open mouth of the channel to provide the hollow, the cross section of the hollow increasing from a
- 10 mounting position where the arm is mounted on the earthmoving machine to an outer end where the arm is secured to the blade.
